

Figure 1 is a log-linear plot showing the number of bitstrings K required for a given Hilbert space dimension. The x-axis is logarithmic, ranging from 10^{-3} to 10^{-1} . The y-axis is linear, ranging from 0 to 1.0. Four methods are compared: BARK (blue circles), Simplified BARK (green triangles), Ceiling (black dotted line), and SKQD (orange solid line). SKQD is a constant horizontal line at $y=1.0$. The other three methods show a sharp drop in K as the Hilbert space dimension increases, with BARK and Simplified BARK performing better than the Ceiling method.

runs per point -- BARK: 126-486, Ceiling: 126-486, SKQD: 126-486, Simplified BARK: 126-486
