

Figure 1 is a line plot showing the number of bitstrings K required for a given Hilbert space dimension. The x-axis is logarithmic, representing the number of bitstrings K / Hilbert space dimension, ranging from 10^{-3} to 10^{-1} . The y-axis represents the number of bitstrings K . Four methods are compared: BARK (blue circles), Simplified BARK (green triangles), Ceiling (black squares), and SKQD (orange line). All methods show a sharp drop in K as the Hilbert space dimension increases, with SKQD consistently requiring the most bitstrings and BARK/Simplified BARK requiring the fewest.

runs per point -- BARK: 18-174, Ceiling: 18-174, SKQD: 18-174, Simplified BARK: 18-174
