

The figure displays four histograms, each corresponding to a different system size N . The x-axis represents the ground-state density on a logarithmic scale, and the y-axis represents the number of runs. Each histogram compares the distribution of 'all runs' (gray bars) with the distribution of 'runs in this folder' (blue bars). Vertical dashed lines indicate the 'low', 'mid', and 'high' density thresholds for each N .

N	low threshold	mid threshold	high threshold	low runs	low runs in folder	mid runs	mid runs in folder	high runs	high runs in folder
6	0.234	-	-	234	120	-	-	252	120
8	0.170	0.219	-	174	90	114	114	138	138
10	0.115	0.205	-	156	66	174	174	102	102
12	0.113	0.192	-	132	66	126	126	126	126
