

The graph displays the performance of four methods: BARK (blue line with circles), Simplified BARK (green line with triangles), Ceiling (black dashed line), and SKQD (orange solid line). The x-axis represents noise levels, and the y-axis represents performance. The Ceiling method shows a steady decline in performance as noise increases. BARK and Simplified BARK maintain higher performance, with Simplified BARK generally outperforming BARK at higher noise levels. SKQD performance remains relatively stable but is lower than the other methods. Shaded regions around the lines indicate confidence intervals.

Number of bitstrings K / Hilbert space dimension

runs per point -- BARK: 25, Ceiling: 25, SKQD: 25, Simplified BARK: 25
